

Drawings of the USS Monitor's Steam Engine  
were created for use with Tabloid size paper ( 11x17) in  
order to allow detailed information to be displayed.  
Printing on smaller paper is possible, but not recommended.

Dividers (14) between the Sub-assemblies is a benefit to allow  
Quick access to the various sections.

Enjoy the fabulous engine designed and built by a great  
engineer, the one and only John Ericsson

Rich Carlstedt
